

1     ABSTRACT OF THE DISCLOSURE

          A method of constructing a system by  
collecting information and know-how is presented. The  
method includes the steps of storing information  
5     including development situations, know-how, and  
knowledge in a solution bank by a unit of a solution  
pattern, and obtaining contents corresponding to a  
desired system so as to construct the desired system by  
accessing the solution bank from a computer in which  
10    the desired system is to be constructed.
